# OPEN JOURNAL SYSTEMS

*aboriginal policy studies* is a new online, peer-reviewed and multidisciplinary journal that, on a bi-annual basis, publishes original, scholarly, and policy relevant research on issues relevant to Métis, non-status Indians and urban Aboriginal peoples in Canada. We encourage the submission of articles by and for a wide audience of scholars, researchers, community activists, and policymakers. Though focused on the Canadian milieu, we welcome comparative work from an international Indigenous context pertinent to Canadian readers. A similarly broad scope of methodological approaches is encouraged.

La revue *Études des Autochtones* est une publication en ligne pluridisciplinaire et évaluée par les pairs qui, deux fois par année, publie des recherches originales, érudites et relatives à la politique sur des sujets touchant les Métis, les Indiens non inscrits et les peuples autochtones vivants en milieu urbain au Canada. Nous invitons la soumission d'articles par et pour un vaste public d'érudits et d'érudites, de chercheurs et chercheuses, d'activistes communautaire et de décisionnaires. Bien que nous nous concentrions sur le milieu canadien, nous acceptons avec plaisir la proposition d'études comparatives provenant d'un contexte autochtone international et intéressantes pour le contexte canadien. Nous encourageons également un large éventail d'approches méthodologiques.

## News Alert

### Commissioner Geoghegan-Quinn discusses Open Access with key stakeholders

Brussels, 25 September 2012

European Commissioner for Research, Innovation and Science Máire Geoghegan-Quinn yesterday met with a number of key stakeholder groups in the drive to improve access to scientific information produced in Europe. The Commissioner met separately with traditional scientific publishers, open access publishers, the open access community, and research funders and international organisations (see full list below).

Following the meetings, Commissioner Geoghegan-Quinn said:

"Open access is about giving European taxpayers a better return on their €87 billion annual public investment in research and development. Broader and more rapid access to scientific papers and data will make it easier for researchers and businesses to build on the findings of public-funded research. This will boost Europe's innovation capacity and give citizens quicker access to the benefits of scientific discoveries."

I appreciate the fact that various groups who have a stake in this have met with me today. We had a very positive exchange and I had a chance to hear from all these groups first hand, following the publication of our Commission strategy on open access in July. I explained that the European Commission is absolutely committed to this policy and that we need to work together in order to implement open access in Horizon 2020. A close partnership is indispensable for the long-term success of this idea."

The meetings come following the publication of a Commission communication on access to scientific information in July. The Commission has

## Australian Research Council implements a new Open Access Policy

Wed, 09/01/2013 – thembani.malapela

The Australian Research Council (ARC) has introduced, with effect from the 1st of January 2013, a new open access policy for all ARC funded research. This policy mandates that all funded research must be deposited into an open access institutional repository within the 12 months period from the date of publication.

The Australian Research Council policy joins similar funder mandates such as [Welcome Trust](#), [Department of International Development-UK](#) (DFID), and [National Health Institutes](#); however, the ARC policy has been found weak in (i) enforcing compliancy and (ii) that it does not require grantees to retain the rights needed to authorise open access. Peter Suber, phrased this latter loophole with this cliché, "Make your work OA unless your publisher won't allow it."

Visit [AIMS Open Access pages](#) for a collection of different types OA mandates.
